How/Where to measure

- Static Height - measure from chassis to suspension mounting points.
- Compressed Height - measured from Bump Stop to Spring or chassis (where suspension will "bottom out") then subtract from Static Height.
- Extended Height - Jack up chassis until tire is just off the ground then measure from chassis to suspension mounting points.

FRONT REAR

- Static Height

- Compressed Height

- Extended Height

- Travel

NOTES: i.e. number of springs removed or type of spring used.
